How do EU-15 Member States Benefit from the Cohesion Policy in the V4?

Prepared within the *Ex post evaluation and forecast of benefits to EU-15 countries as a result of Cohesion Policy implementation in V4 countries,* commissioned by Polish Ministry of Economic Development

country profile: Germany

imapp

ibs

This study is co-financed by the Cohesion Fund under Operational Programme Technical Assistance 2014-2020.

1 Introduction

Results presented in this material are based on the final report from *Ex post evaluation and forecast of benefits to EU-15 countries as a result of Cohesion Policy implementation in the V4*, a study conducted by imapp and the Institute for Structural Research between September 2015 and May 2016. The evaluation was commissioned by the Polish Ministry of Economic Development and completed in cooperation with the Czech Ministry of Regional Development, the Hungarian Prime Minister's Office and Government Office of the Slovak Republic.

2 Impact of Cohesion Policy on economies of the V4

According to the macroeconomic simulation applied in this evaluation, by the end of effective spending under the 2007-2013 programming period (i.e. in 2015), the GDP of the V4 was higher by ca. 6% than it would have been under the no-support from structural funds and the Cohesion Fund scenario. Two sets of mechanisms underpinned this scale of impact. Firstly, the V4 business environment was invigorated by the growth in aggregate demand induced by the implementation of projects co-financed by EU funds, e.g. in demand for building services or machinery and equipment procurements. Secondly, higher GDP was also driven by supply-side mechanisms, i.e. gradual increase in production capacity of the economy thanks to the impact of implemented projects.

Numerous evaluations also confirm tangible impacts of the Cohesion Policy in areas such as improved innovation, positive labour market developments, higher transport accessibility, improved environmental protection and enhanced energy efficiency. Despite many challenges, taken on for a reason, it is clear that EU-funded programmes in V4 countries have achieved most of their objectives. Nevertheless, that the unprecedented scale of growth-related investments in V4 countries would not have been possible without the contribution from structural funds and the Cohesion Fund made up largely of payments by the EU-15 into the EU budget. However, the spending is offset by economic benefits and other positive externalities, which make the Cohesion Policy in its current form beneficial both to beneficiaries of the support as well as to the member states which co-finance the interventions, notably Germany.

3 Benefits to Germany

The total values of economic benefits to Germany resulting from the implementation of the Cohesion Policy in V4 during the 2007-2013 financial perspective can be broken down into three major categories: indirect export benefits, direct export benefits and direct capital benefits.

category of benefits	interpretation	value (EUR bn)[1]	% of benefits to the EU-15
indirect export benefits	benefits resulting from increased exports to the V4 induced by the macroeconomic impact of Cohesion Policy interventions, less the direct involvement of German companies in the implementation of projects	EUR 34.9 bn	45.45%
direct export benefits	benefits resulting from direct involvement as contractors/suppliers of German-based companies in projects funded under Cohesion Policy in V4	EUR 4.8 bn	41.21%
direct capital benefits	benefits resulting from direct involvement as contractors/suppliers of companies owned by German capital groups in in projects funded under Cohesion Policy in V4	EUR 0.5 bn	6.13%
total economic benefits	sum of indirect export benefits, direct export benefits and direct capital benefits	EUR 40.2 bn	41.67%

[1] All values are expressed in constant 2010 prices.

- In absolute terms, Germany enjoyed economic benefits resulting from the implementation of Cohesion Policy in the V4 at the level of over EUR 40 billion during the 2007-2013 programming period, which accounts for 41.7% of all benefits to the EU-15 and makes Germany the biggest beneficiary in absolute terms.
- The structure of benefits to Germany is similar to the structure of benefits enjoyed by the entire EU-15, with Poland accounting for more than half of the economic benefits.
- Germany stands out in terms of its higher-than-average share of **indirect export benefits**, i.e. benefits resulting from German companies satisfying the increased aggregate demand fueled by the implementation of projects funded under Cohesion Policy in the V4. The share of direct export benefits is close to average, while the share of direct capital benefits is much smaller in comparison with other EU-15 member states.

Source: Own elaboration

When the stream of benefits to Germany is compared to contributions of this country to the overall financing of Cohesion Policy in the V4 during the 2007-2013 programming period, the ratio stands at 150%, which means that Germany is not only the biggest beneficiary in absolute values, but also scores second in relative terms.[2] This high ratio reflects mainly the importance of Germany as a one of the largest trading partners of all V4 countries.

[2] Calculated based on gross contributions of Germany to the EU-budget in 2007-2015.

Figure 4. Total economic benefits to the EU-15 in relation to gross contribution to Cohesion Policy implementation in the V4 in 2007-2013 programming period (EUR bn,%)

The EU-15 MS **contributed** ca. **EUR 120 billion** to the cohesion policy in V4.

The **total economic benefits to EU-15 MS** resulting from implementing cohesion policy in V4 amount to **EUR 96.6 billion**, which is approx. **80% of their contribution**.

Percentages on the map: benefits to each EU-15 country as a % of its gross spending for the cohesion policy in V4 countries in 2007-2015.
